

FUJITSU Image Scanner fi-6670

High speed 90 ppm/180 ipm
capable scanner

shaping tomorrow with you

■ fi-6670 Features

■ Speedy

The 90 ppm/180 ipm* capable (A4, landscape, 200 dpi) fi-6670 is among the fastest scanners in their class. Their ability to continuously scan 200 sheet mixed batch documents containing paper of different weights, quality and sizes enables both of these scanners to efficiently digitize large volumes of documents. On top of this, the fi-6670 is able to scan paper that is up to 3 m long, which enables them to digitize electrocardiograms, instrumental data readings and other long documents.

* Scanning speeds may vary due to the system environment used.

● System requirements (recommended)
CPU: Intel® Core™ i5 2.5GHz or higher, Memory: 4GB or higher, HDD: 7,200rpm, Interface: USB 3.0/2.0

■ Loaded with "intelligent" functions for efficient operation

The fi-6670 is loaded with 2 high end fi Series functions that enable it to efficiently scan mixed batch documents containing paper of different weights, quality and sizes.

● Intelligent multifeed function

The intelligent multifeed function simplifies pre-scanning preparation and improves efficiency by ignoring documents that tend to trigger false multifeed alerts, such as photo and sticky note attached documents.

● Trapezoid-shaped and tab attached document cropping / punch hole removal functionality

In addition to being loaded with a function that ensures that trapezoid-shaped documents as well as index tab and sticky note attached documents are scanned in their entirety, the fi-6670 supports a function that removes the circular and angular punch hole representations that are created from scanning loose-leaf sheets, courier service forms and other similar documents.

■ Renewed scanner driver and image capturing software

● PaperStream IP – produce high quality image processing

PaperStream IP is the scanner driver for fi Series which is based on TWAIN/ISIS standard. With the advanced black and white process, various documents can be automatically and easily converted into image data suitable for OCR (Optical character recognition). High quality image data can be created without pre-setting the scanning settings beforehand.

● PaperStream Capture – enhance batch scanning

PaperStream Capture is an application to scan and manage the scanned data using fi Series scanners. Whether it is adjusting the scanning settings or performing batch scanning, you can complete the tasks easily with the user-friendly UI. With the seamless linkage with PaperStream IP, you can perform high quality image processing and batch scanning at the same time.

■ Centralized management of multiple scanners

The bundled "Scanner Central Admin" application allows you to manage multiple scanners together. For example, you can update the scanner settings and drivers, as well as monitor the operating status of each scanner.

■ Easy placement

Closable operating panels located on the left and right side of the unit permit the scanner to be placed against a wall or in a corner without affecting operability.

■ Post imprinter support (Option)

The fi-6670 supports an imprinter option (fi-667PR) that is capable of printing dates and other information on the back of scanned documents in order to simplify the management of the original document at a later date.
